

# **Rochelle Park School District**

**Curriculum Guide** 

Science Grade 1

### **Overview**

The New Jersey Student Learning Standards for Science (NJSLS-S) describe the expectations for what students should know and be able to do as well as promote three-dimensional science instruction across the three science domains (i.e., physical sciences, life science, Earth and space sciences). From the earliest grades, the expectation is that students will engage in learning experiences that enable them to investigate phenomena, design solutions to problems, make sense of evidence to construct arguments, and critique and discuss those arguments (in appropriate ways relative to their grade level).

The foundation of the NJSLS-S reflects three dimensions — science and engineering practices, disciplinary core ideas, and crosscutting concepts. The performance expectations are derived from the interplay of these three dimensions. It is essential that these three components are integrated into all learning experiences. Within each standard document, the three dimensions are intentionally presented as integrated components to foster sensemaking and designing solutions to problems. Because the NJSLS-S is built on the notions of coherence and contextuality, each of the science and engineering practices and crosscutting concepts appear multiple times across topics and at every grade level. Additionally, the three dimensions should be an integral part of every curriculum unit and should not be taught in isolation.

#### **Unit 1 Overview**

#### Unit 1: Patterns of Change in the Night Sky

Grade: 1

Content Area: Earth Science

Pacing: 15 Instructional Days

#### **Essential Question**

Can we predict how the sky will change over time?

#### **Student Learning Objectives (Performance Expectations)**

1-ESS1-1 Use observations of the sun, moon, and stars to describe patterns that can be predicted.

1-ESS1-2 Make observations at different times of year to relate the amount of daylight to the time of year.

#### **Unit Summary**

In this unit of study, students observe, describe, and predict some patterns in the movement of objects in the sky. The crosscutting concept of patterns is called out as an organizing concept for the disciplinary core ideas. Students are expected to demonstrate grade-appropriate proficiency in planning and carrying out investigations and analyzing and interpreting data. Students are also expected to use these practices to demonstrate understanding of the core ideas.

#### **Technical Terms**

Sun, Moon, Stars, Planets, Space, Solar System, Inner Solar System, Outer Solar System, Patterns, Predictions, Degrees, East, West, North, South, Light, Heat, Food Change, Clouds, Rain, Weather, Seasons, Electricity, Solar Power, Calendars, Sundial, Orbits, New Moon, Crescent Moon, Gibbous Moon, Full Moon, Waxing, Waning, Telescope, Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, Neptune, Pluto, Hemisphere, Constellation, Eclipse

#### **Formative Assessment Measures**

### Part A: What patterns of change can be predicted when observing the sun, moon, and stars?

Students who understand the concepts can:

- Observe and use patterns in the natural world as evidence and to describe phenomena.
- Use observations (firsthand or from media) to describe patterns in the natural world in order to answer scientific questions.
- Use observations of the sun, moon, and stars to describe patterns that can be predicted. Examples of patterns could include:
  - The sun and moon appear to rise in one part of the sky, move across the sky, and set.
  - Stars other than our sun are visible at night but not during the day. (Assessment of star patterns is limited to stars being seen at night and not during the day.)

### Part B: What is the relationship between the amount of daylight and the time of year?

Students who understand the concepts can:

- Observe and use patterns in the natural world as evidence and to describe phenomena.
- Make observations (firsthand or from media) to collect data that can be used to make comparisons.
- Make observations at different times of the year to relate the amount of daylight to the time of year.
  - Note: The emphasis is on relative comparisons of the amount of daylight in the winter to the amount in the spring or fall; assessment is limited to relative amounts of daylight, not to quantifying the hours or time of daylight.)

#### 5E Model

The Earth and Beyond: Sunrise, Sunset and Day Length
Using the following interactive website, students can compare the amount of daylight that occurs throughout the year. To create a
personal connection to the activity, students can input their birthdays and then compare daylight hours. Whose birthday has the most
daylight? Whose birthday has the least?
http://www.childrensuniversity.manchester.ac.uk/interactives/science/earthandbeyond/sunrisesunset/

## Engage Anticipatory Set

Using the following website, students can create and view sunrise and sunset calendars for each month of the year for their town.

After viewing several calendars, ask students to make predictions about future sunrise & sunset patterns. Calendar data can further be used to compare sunrise and sunset times across seasons.

http://www.sunrisesunset.com/usa/New Jersey.asp

1-ESS1-2 Make observations at different times of year to relate the amount of daylight to the time of year.

#### Moon Giant

Sunrise and Sunset Calendar

Using the following interactive website, students can view the sun and moon patterns for each month the year. As students explore these patterns, draw their attention to the position of the sun and how it changes month to month. <a href="http://www.moongiant.com/">http://www.moongiant.com/</a>

**Exploration Student** 

The Predictable Patterns of the Sun and the Seasons

Inquiry	In this lesson, students will investigate the predictable patterns of our sunrise and sunset and how it relates to our seasonal patterns. <a href="http://betterlesson.com/lesson/635856/the-predictable-patterns-of-the-sun-and-the-seasons">http://betterlesson.com/lesson/635856/the-predictable-patterns-of-the-sun-and-the-seasons</a>
	Patterns of Daylight In this lesson, students will describe patterns of the sun that lead to more sunlight in the summer.  http://betterlesson.com/lesson/639226/patterns-of-daylight
	Data for Days In this lesson, students will analyze data to make comparisons between the amount of daylight in summer and winter.  http://betterlesson.com/lesson/639228/data-for-days
Explanation Concepts and Practices	In these lessons: Teachers should: Introduce formal labels, definitions, and explanations for concepts, practices, skills or abilities. Students should: Verbalize conceptual understandings and demonstrate scientific and engineering practices. Topics to Be Discussed in Teacher Directed Lessons (Disciplinary Core Ideas):  ESS1.B: Earth and the Solar System Seasonal patterns of sunrise and sunset can be observed, described, and predicted.
Elaboration Extension Activity	Our Super Star  Use this lesson guide to teach students basic facts about the Sun, model the mechanics of day and night, and use solar energy to make a tasty treat. <a href="http://az.pbslearningmedia.org/resource/ess05.sci.ess.eiu.lp_superstar/our-super-star/">http://az.pbslearningmedia.org/resource/ess05.sci.ess.eiu.lp_superstar/our-super-star/</a> Additional Related Resources <a href="https://www.opened.com/search?offset=0&amp;standard=1.ESS1.2">https://www.opened.com/search?offset=0&amp;standard=1.ESS1.2</a>

#### **Unit 2 Overview**

### **Unit 2: Characteristics of Living Things**

Grade: 1

Content Area: Life Science
Pacing: 15 Instructional Days

#### **Essential Question**

N/A

#### **Student Learning Objectives (Performance Expectations)**

1-LS3-1. Make observations to construct an evidence-based account that young plants and animals are like, but not exactly like, their parents.

1-LS1-2. Read texts and use media to determine patterns in behavior of parents and offspring that help offspring survive.

#### **Unit Summary**

In this unit of study, students develop an understanding of how plants and animals use their external parts to help them survive, grow, and meet their needs, as well as how the behaviors of parents and offspring help offspring survive. The understanding that young plants and animals are like, but not exactly the same as, their parents is developed. The crosscutting concept of patterns is called out as an organizing concept for the disciplinary core ideas. Students are expected to demonstrate grade-appropriate proficiency in obtaining, evaluating, and communicating information and constructing explanations. Students are also expected to use these practices to demonstrate understanding of the core ideas.

#### **Technical Terms**

Parents, Offspring, Similarities, Differences, Traits, Inheritance, Genes, DNA, Survive, Types of Parenting Behaviors (e.g., nesting, etc.), Types of Survival Behaviors (e.g., crying, etc.), Mammals, Reptiles, Fish, Birds, Insects

#### **Formative Assessment Measures**

### Part A: How are young plants and animals alike and different from their parents?

Students who understand the concepts are able to:

- Observe and use patterns in the natural world as evidence and to describe phenomena.
- Make observations (firsthand or from media) to construct an evidence-based account for natural phenomena.
- Make observations to construct an evidence-based account that young plants and animals are like, but not exactly like, their parents.
  - Examples of patterns could include features plants or animals share.
  - Examples of observations could include that leaves from the same kind of plant are the same shape but can differ in size and that a particular breed of puppy looks like its parents but is not exactly the same.

### Part B: What types (patterns) of behavior can be observed among parents that help offspring survive?

Students who understand the concepts are able to:

- Observe and use patterns in the natural world as evidence and to describe phenomena.
- Read grade-appropriate texts and use media to obtain scientific information to determine patterns in the natural world.
- Read texts and use media to determine patterns in behavior of parents and offspring that help offspring survive. Examples of patterns of behaviors could include:
  - The signals that offspring make, such as crying, cheeping, and other vocalizations.
  - The responses of the parents, such as feeding, comforting, and protecting the offspring.

#### **Essential Question**

N/A

#### **Student Learning Objectives (Performance Expectations)**

1-LS1-1. Use materials to design a solution to a human problem by mimicking how plants and/or animals use their external parts to help them survive, grow, and meet their needs.\*

### **Unit Summary**

In this unit of study, students develop an understanding of how plants and animals use their parts to help them survive, grow, and meet their needs. Students also need opportunities to develop possible solutions. As students develop possible solutions, one challenge will be to keep them from immediately implementing the first solution they think of and to instead think through the problem carefully before acting. Having students sketch their ideas or make a physical model is a good way to engage them in shaping their ideas to meet the requirements of the problem. The crosscutting concept of structure and function is called out as an organizing concept for the disciplinary core ideas. Students are expected to demonstrate grade-appropriate proficiency in constructing explanations, designing solutions, and in developing and using models. Students are expected to use these practices to demonstrate understanding of the core ideas.

#### **Technical Terms**

Bio, Mimicking, Biomimicry, External Body Parts (e.g., Tails, Roots, Quills, Spines, Beak, Claws, etc.), Adaptation, Engineer, Camouflage, Animals (e.g., Puffin, Elephant, Zebra, etc. - Dependent on Lesson Used)

#### **Formative Assessment Measures**

### Part A: How can humans mimic how plants and animals use their external parts to help them survive and grow? Concepts F

Students who understand the concepts are able to:

- Observe and describe how the shape and stability of structures of natural and designed objects are related to their functions.
- Use materials to design a device that solves a specific problem or [design] a solution to a specific problem.
- Use materials to design a solution to a human problem that mimics how plants and/or animals use their external parts to help them survive, grow, and meet their needs: Examples of human problems that can be solved by mimicking plant or animal solutions could include:
  - Designing clothing or equipment to protect bicyclists by mimicking turtle shells, acorn shells, and animal scales.
  - Stabilizing structures by mimicking animal tails and roots on plants.
  - Keeping out intruders by mimicking thorns on branches and animal quills.
  - Detecting intruders by mimicking eyes and ears.
- Develop a simple model based on evidence to represent a proposed object or tool. Develop a simple sketch, drawing, or physical model to illustrate how the shape of an object helps it function as needed to solve a given problem.

#### **Unit 4 Overview**

### **Unit 4: Light and Sound**

Grade: 1

Content Area: Physical Science

Pacing: 20 Instructional Days

#### **Essential Question**

N/A

### **Student Learning Objectives (Performance Expectations)**

1-PS4-2 Make observations to construct an evidence-based account that objects in darkness can be seen only when illuminated.

1-PS4-3 Plan and conduct investigations to determine the effect of placing objects made with different materials in the path of a beam of light.

1-PS4-1 Plan and conduct investigations to provide evidence that vibrating materials can make sound and that sound can make materials vibrate.

#### **Unit Summary**

In this unit of study, students develop an understanding of the relationship between sound and vibrating materials as well as between the availability of light and the ability to see objects. The idea that light travels from place to place can be understood by students at this level by placing objects made with different materials in the path of a beam of light and determining the effect of the different materials. The crosscutting concept of cause and effect is called out as an organizing concept for the disciplinary core ideas. Students are expected to demonstrate grade appropriate proficiency in planning and carrying out investigations, constructing explanations, and designing solutions. Students are also expected to use these practices to demonstrate understanding of the core ideas.

#### **Technical Terms**

Darkness, Illumination, Light, Light Source, Natural Light Source, Artificial Light, Electricity, Energy, Reflected Light, Absorbed Light, Transparent, Translucent, Opaque, Shadow, Stained Glass, Refracts, Sound, Sound Waves, Vibrations, Light Waves, Light Participles, Pinhole Box, Brightness, Position, Distance, Eardrum, Volume, Pitch, Echo

#### **Formative Assessment Measures**

### Part A: How can you prove that you can only see something when someone shines a light on it or if the object gives off its own light?

Students who understand the concepts can:

- Design simple tests to gather evidence to support or refute ideas about cause and effect relationships.
- Make observations (firsthand or from media) to construct an evidence-based account for natural phenomena.
- Make observations (e.g., in a completely dark room, using a pinhole box, using video of a cave explorer with a flashlight) to construct an evidence based account that objects can be seen only when illuminated (from an external light source or by an object giving off its own light).

Part B: What happens to a beam of light when you put different kinds of things in front of it? How would you design an experiment to prove your thinking?

Students who understand the concepts can:

- Design simple tests to gather evidence to support or refute ideas about cause and effect relationships.
- Plan and conduct investigations collaboratively to produce data to serve as the basis for evidence to answer a question.

### Part C: How do instruments (band) make sound?

Students who understand the concepts can:

- Plan and conduct investigations to provide evidence that vibrating materials can make sound and that sound can make materials vibrate.
- Examples of vibrating materials that make sound could include tuning forks and plucking a stretched string.
- Examples of how sound can make matter vibrate; holding a piece of paper near a speaker making sound, holding an object near a vibrating tuning fork.

	In this lesson, students will learn that all sound is made up of vibrations which produce sound waves that travel through the air to our
	lears. Vibrating matter can make sound and sound makes matter vibrate causing sound waves to travel through the air.

#### **Unit 5 Overview**

### **Unit 5: Communicating with Light and Sound**

Grade: 1

Content Area: Physical Science

Pacing: 25 Instructional Days

#### **Essential Question**

How would we communicate over a distance without the use of any of the devices that people currently use?

### **Student Learning Objectives (Performance Expectations)**

1-PS4-4 Use tools and materials to design and build a device that uses light or sound to solve the problem of communicating over a distance.\*

#### **Unit Summary**

In this unit of study, students continue to develop their understanding of the relationship between sound and vibrating materials as well as between the availability of light and the ability to see objects. Students apply their knowledge of light and sound to engage in engineering design to solve a simple problem involving communication with light and sound. The crosscutting concepts of structure and function and influence of engineering, technology, and science on society and the natural world are called out as organizing concepts for the disciplinary core ideas. Students are expected to demonstrate grade-appropriate proficiency in constructing explanations and designing solutions, asking questions and defining problems, and developing and using models. Students are also expected to use these practices to demonstrate understanding of the core ideas.

#### **Technical Terms**

Light Communication, Sound Communication, String Phone, Vocal Cords

#### **Formative Assessment Measures**

### Part A: How can light or sound be used to communicate over a distance?

Students who understand the concepts can:

- Describe how the shape and stability of structures are related to their function.
- Ask questions based on observations to find more information about the natural and/or designed world.
- Define a simple problem that can be solved through the development of a new or improved object or tool.
- Ask questions, make observations, and gather information about a situation people want to change in order to define a simple problem that can be solved through the development of a new or improved object or tool.
- Develop a simple model based on evidence to represent a proposed object or tool.
- Develop a simple sketch, drawing, or physical model to illustrate how the shape of an object helps it function as needed to solve a given problem.
- Use tools and materials provided to design a device that solves a specific problem.
- Use tools and materials to design and build a device that uses light or sound to solve the problem of communicating over a distance. Examples of devices could include: A light source to send signals, Paper cup and string telephones, A pattern of drum beats
